A7 (15 marks + up to 3 bonus marks)

Focus: *functions, multi-scene animation*

In class, we created a simple multi-scene animation where the user can go from one scene to the other by pressing certain keys on the keyboard. In this assignment, you will repeat this exercise again but with the following differences:

- Switching scenes is done by clicking a button on the sketch in each scene. That is, clicking the PLAY button on the home screen takes you to the second scene, and clicking the HOME button in the second scene takes you back to the home screen (see the figure below). Hint: we have seen how to do this in the "Conditionals" lecture.
- The second scene (on the right figure below) should include your solution to Q2 of Assignment A6. It can also include another animation if you wish (make sure to clearly indicate in your solution document which animation you used).

Do the following:

1) Unzip the starter code (comes with this zip file) to your computer. Double-click on any of PDE files in the extracted folder to open the project.
2) Fill in the missing code as per the instructions given in the starter code. These instructions are written as comments that start with "REQ".

Do <u>NOT</u> use OOP for this assignment. (5 marks will be deducted if you use OOP)

Marking Guide

+3 for choosing to draw either the first or the second scene in the draw() method.
+4 for the home screen (on the left above).
+4 for the second scene (on the right above).
+4 for handling mouse clicks on the PLAY and HOME buttons.

BONUS

+**up to 3 bonus marks** for adding one more scene and two buttons per scene that allow switching from one scene to any of the other two; e.g. for scene1 on the right in the above figure, you should one extra button that takes you to a third scene.

Submission Instructions

For this assignment, you need to do the following:

1- Copy your solution into this Word document template.
2- Compress your solution document along with the images you used into one zip file.
3- Submit your zip file to Canvas.

Note that you can resubmit an assignment, but the new submission overwrites the old submission and receives a new timestamp.
